

EMPLOYEE PERFORMANCE & SALES ANALYTICS DASHBOARD

An interactive data visualization dashboard built using Employee Performance dataset.

INTRODUCTION

Employee data contains valuable insights related to salary, sales, performance, departments, and compensation. This project develops an interactive Tableau dashboard that converts raw employee data into meaningful visualizations, helping HR professionals and management analyze employee performance and business outcomes effectively.

PROBLEM STATEMENT

Employee information is often maintained in spreadsheets, making it difficult to identify performance trends, compare departments, and evaluate sales contributions. An interactive dashboard is required to transform raw employee data into visual insights for faster and better decision-making.

OBJECTIVES

- Build an interactive Employee Performance & Sales Dashboard.
- Analyze department-wise salary and sales performance.
- Identify top-performing employees.
- Visualize employee distribution across departments.
- Provide dynamic filtering by department and location.

DATASET DESCRIPTION

The dataset contains employee details such as Employee ID, Employee Name, Department, Location, Salary, Performance Rating, Bonus Percentage, Total Compensation, and Total Sales along with other employee-related attributes. Microsoft Excel was used for data cleaning, transformation, and analysis before building the dashboard in Tableau.

PROPOSED DASHBOARD FEATURES

- **KPI Cards** – Total Employees, Total Sales, Average Salary, Average Rating, Average Compensation.
- **Bar Charts** – Department-wise Average Salary and Location-wise Total Sales.
- **Pie Chart** – Employee Distribution by Department.
- **Treemap** – Department-wise Total Sales Contribution.
- **Scatter Plot** – Relationship between Salary and Total Sales.
- **Top 10 Employees Chart** – Highest Sales Performing Employees.
- **Interactive Filters** – Department and Location.

EXPECTED OUTCOMES

- Simplifies employee performance analysis.
- Supports HR and management in data-driven decision-making.
- Enables comparison of departments and employee performance.
- Demonstrates practical application of Excel, Tableau, and Business Intelligence techniques.

CONCLUSION

The Employee Performance & Sales Analytics Dashboard transforms raw employee data into an interactive decision-support system that provides meaningful insights into salary, sales, and employee performance through dynamic visualizations and interactive filters.
